Compliance Required - EAR, ITAR, CTPAT, AES, FTA's and ATF

Export Regulations Compliance and Controls are
 required of every exporter. Jurisdiction covers all
 U.S. exporters and their subsidiaries.

All exports are subject to the Export Administration
 Regulations (EAR), even when your product appears
 benign. There are screenings of the various lists, Denied
 Parties, Specially Designated Terrorists (SDT),
 Unverified, the Entities List and the Specially Designated
 Nationals (SDN) list to contend with. There are exports
 that could proliferate WMD's. There are Military
 applications that require license. Tech data is of special
 concern.

When products are manufactured with certain technology
 or components that draw upon these areas of
 manufacture, they may in fact be subject to further
 regulations. These areas of manufacture and distribution
 include:

*nuclear materials • chemical or biological materials •
 toxins • electronics • computers , (including software and
 technology) telecommunications • information security
 lasers and sensors • navigation equipment • avionics
 marine and space or propulsion systems.*

Since 1989, Evolutions in Business has been engaged in
 training corporations in Export Regulations, (EAR) and
 (ITAR) (ATF) Compliance, Export Documentation, Import
 Compliance (CTPAT), Letters of Credit and NAFTA and
 other FTA's. In that time, we have trained thousands of
 individuals from various corporations including, Brooks
 Automation, Bruker Detection, Lucent Technology,
 Olympus NDT, Raytheon, Segway, Simplex, BAE,
 Lockheed Martin, Timken, TYCO, and Munters, just to
 name a few.
